Our Publications

We pride ourselves on being at the forefront of providing management support during these constantly changing times. We stay abreast of the latest thinking by working with many diverse clients, as well as attending many industry events. At all of these venues, WE LISTEN AND WE LEARN!

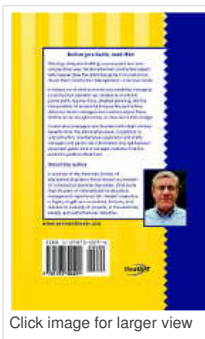

Our associates have published books, papers and articles based on these learnings. Many of these publications have made their way into industry forums. Others have been used as the basis of professional development workshops.

One book of note is by Peter Hessler, the president of Construction Business Associates.

His book fills a niche that has long been empty in the world of power plant construction. It is a collection of all of the important steps, thoughts and processes needed when embarking on any major construction project today, whether a new build or a re-build. It does not tell you how to size a crane for a particular lift, instead it urges you to ask the question: Is a crane even the most cost effective way to make this lift?

For more information about this publication, and for information on ordering a copy, just click on the book itself. You will be redirected.

For a project to be a success
You must:

Plan the work and

Work the plan

Some of the additional publications that can be obtained by contacting us are:

Construction Management for Today's Power Plant Outage: Or, How to Keep Those Shut-Downs on Budget

A paper reviewing the financial control skills required to ensure the success of an outage.

Power Plant Project Management: Some of the DOs and DON'Ts

A paper describing the right and wrong ways to manage each of the five project management phases of a power plant project.

Outage Readiness Assessment – A Guide for Successful Outages

A paper comparing various approaches to reviewing the state of readiness before an outage begins.

Power Plant Construction Management – A Framework For Survival

We can do this for you

And there are more. Just contact us.
